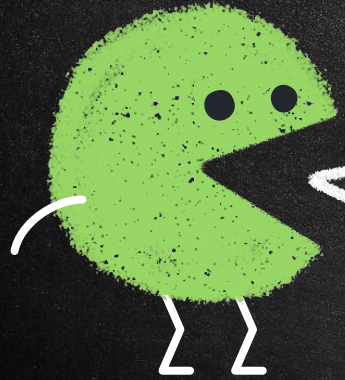
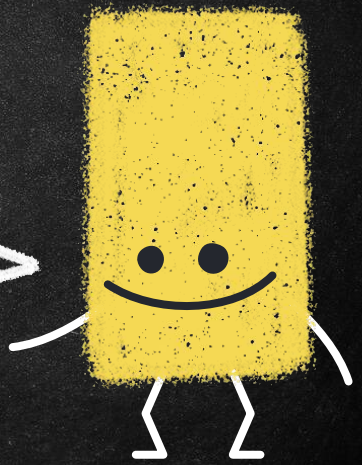
"Cloud Agnostic" And Other Lies of the DevOps Movement





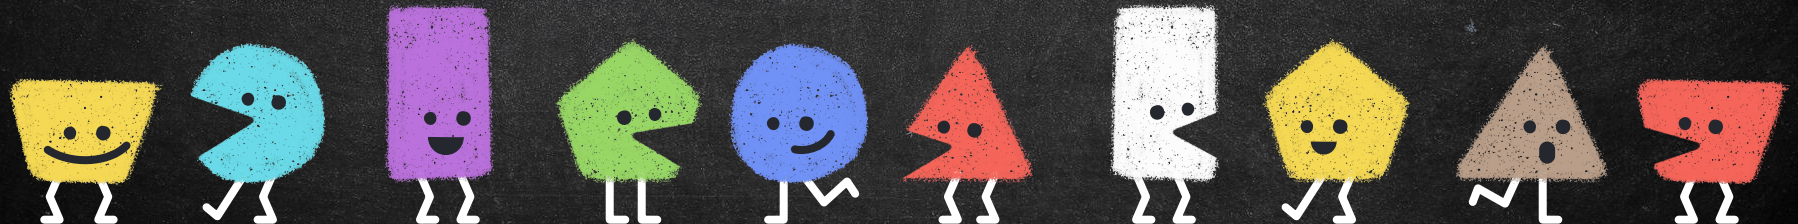
Hi!

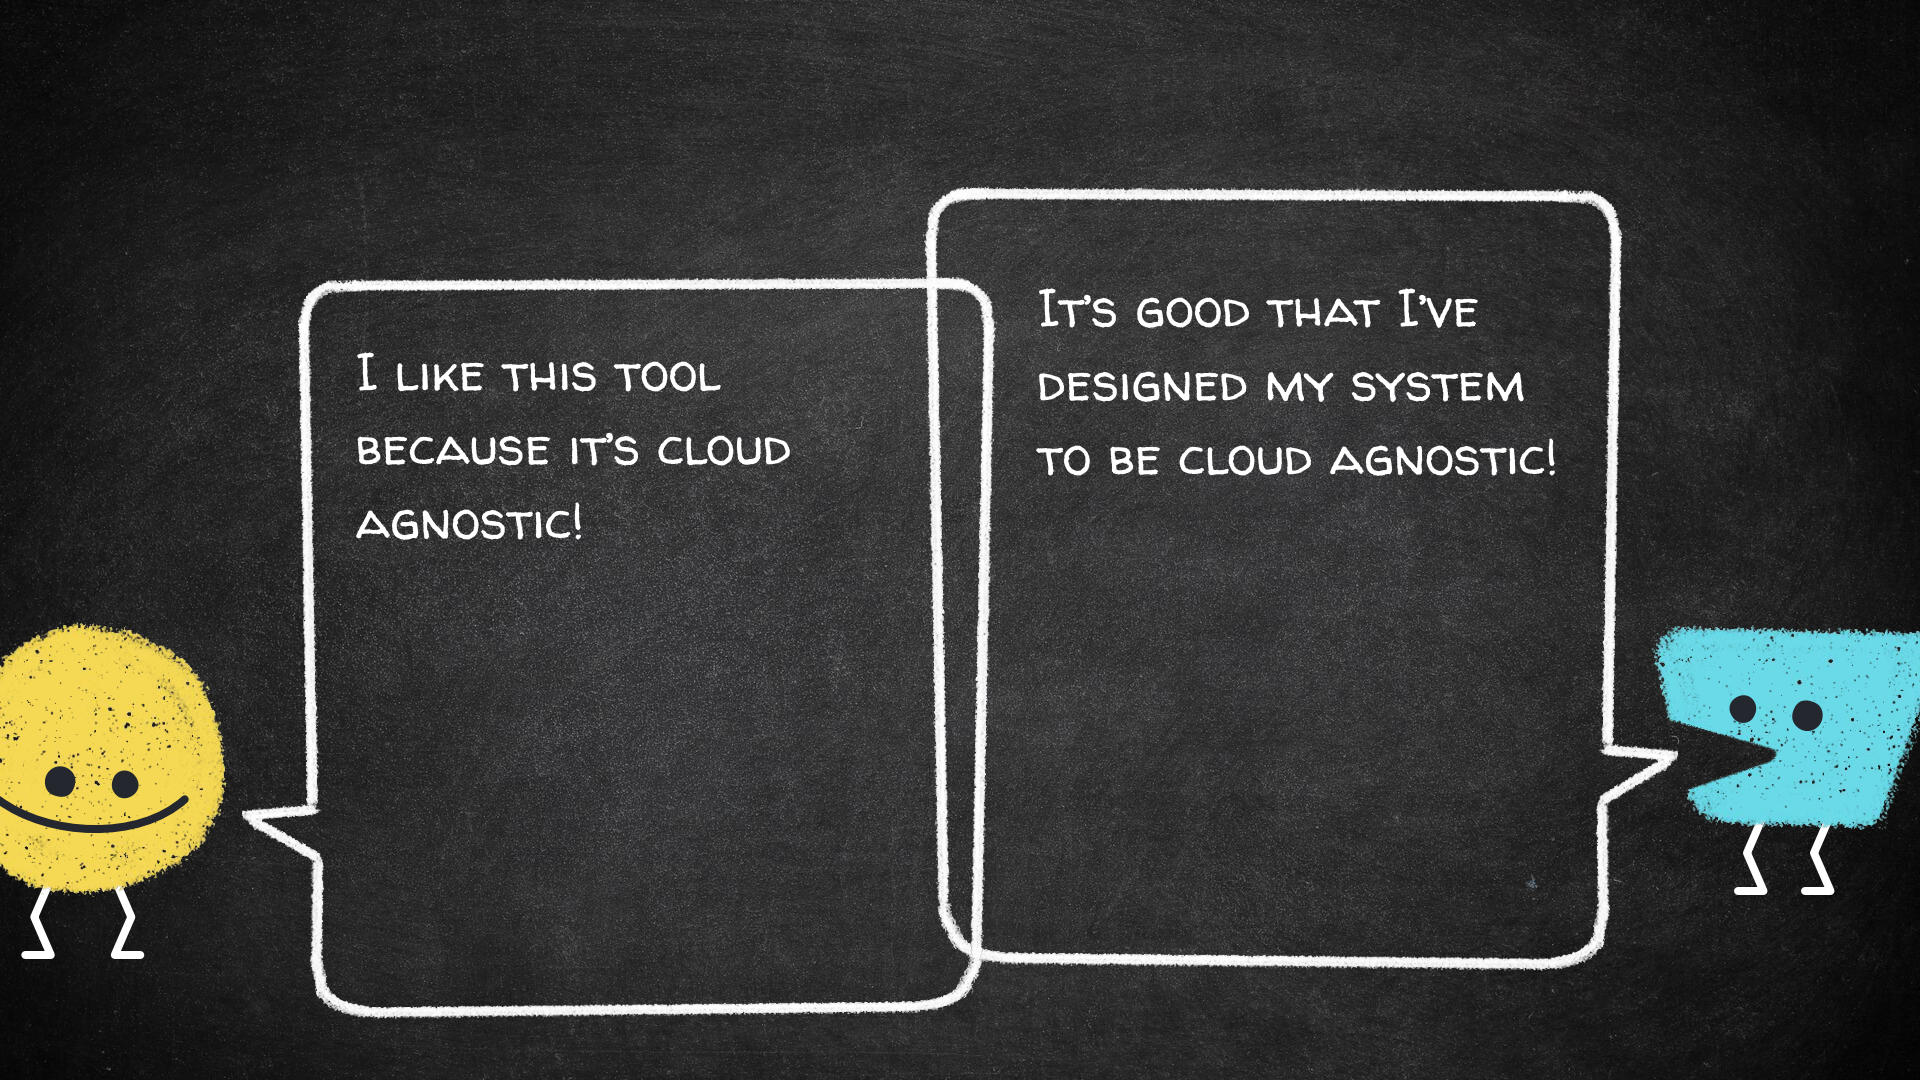
My name is Quentin Hartman

I am the VP of Infrastructure and DevOps at Velocity Global*

I love what happens when technology and community combine!

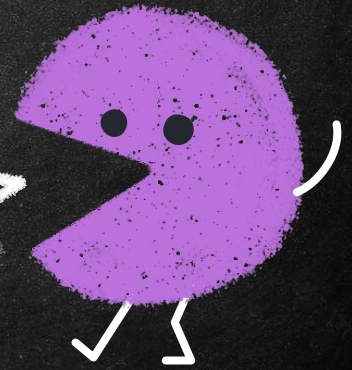
*All of these opinions are mine, and do not necessarily represent those of my employer. Don't yell at them if I say something that makes you mad





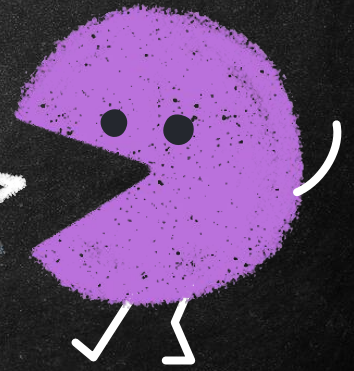
I like this tool because it's cloud agnostic!
It's good that I've designed my system to be cloud agnostic!

Gitflow should be your branching strategy.

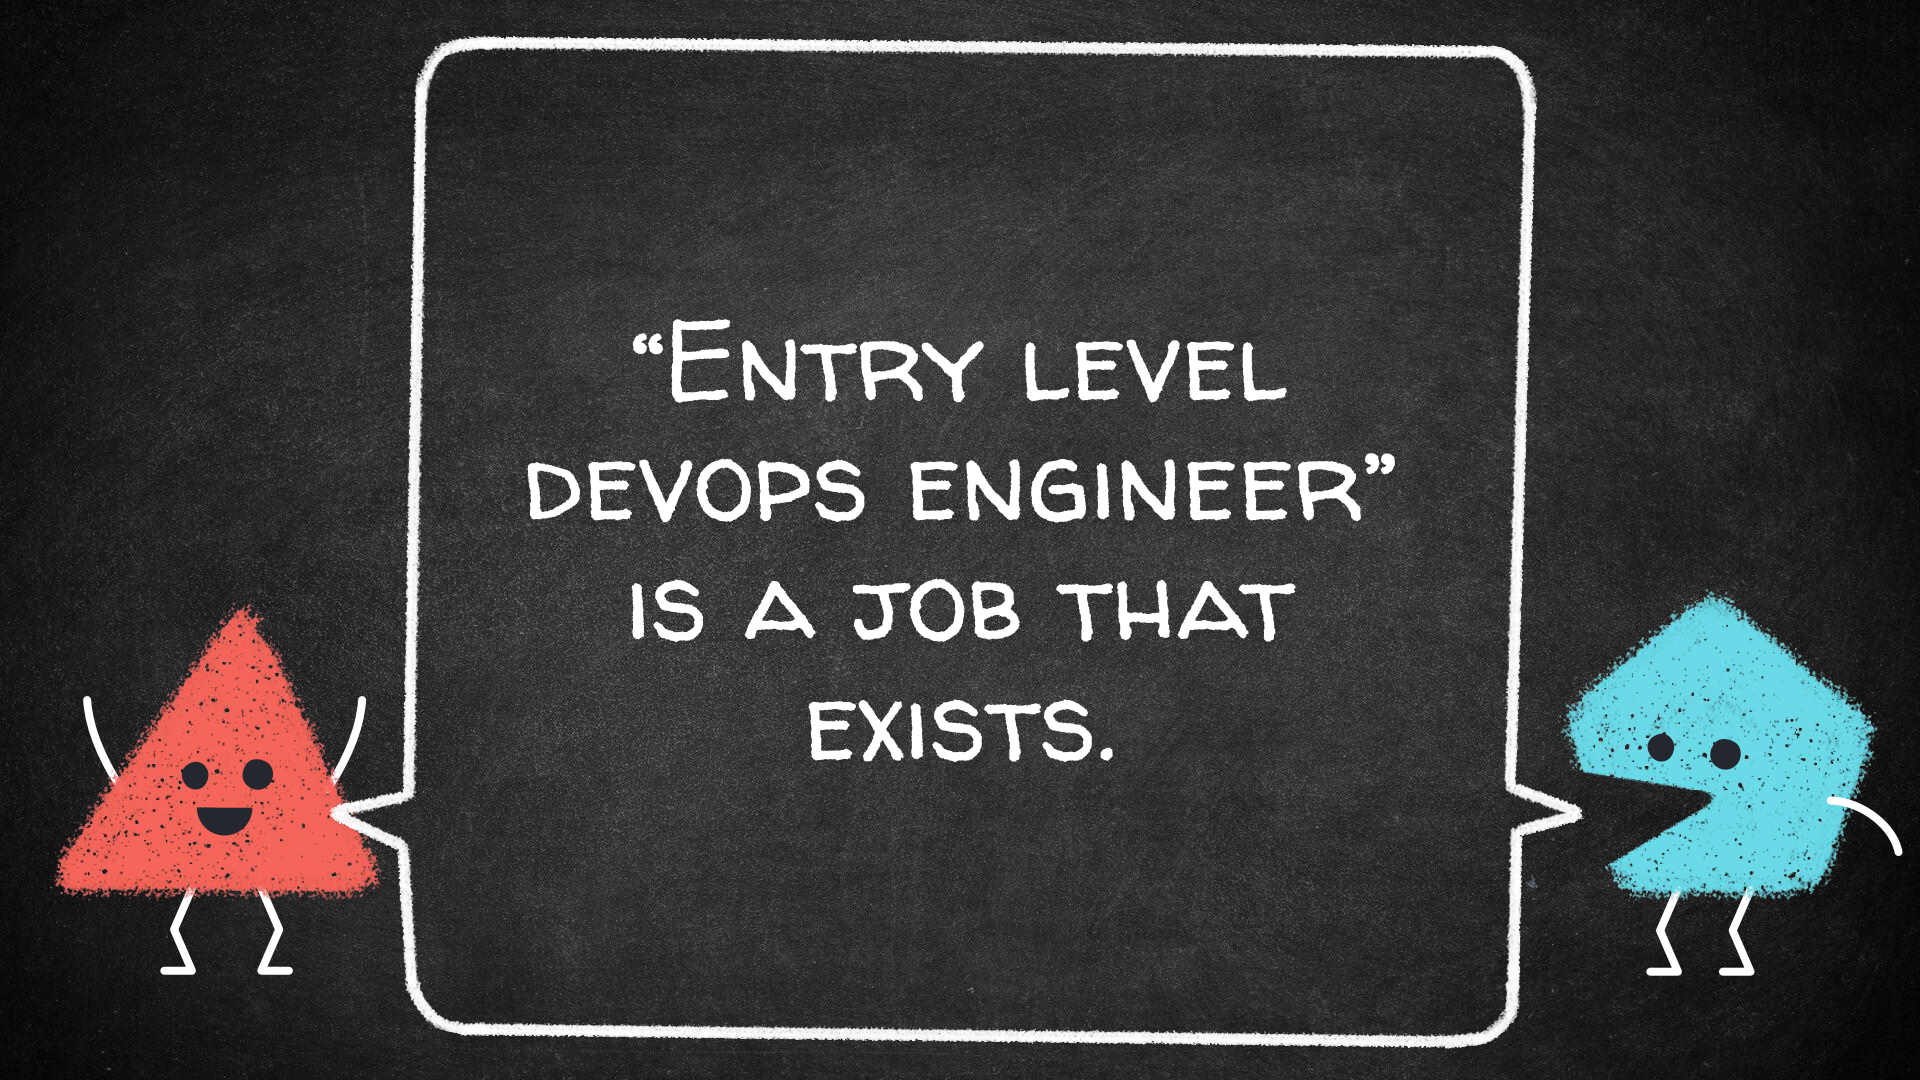


You should use kubernetes to manage your containers.

Having a branch for each environment is a good branching strategy.



Always choose the best tool for the job.



"Entry level DevOps Engineer" is a job that exists.

Thank You!
